

Variable speed drives

Altivar 71 and Altivar 71 Plus

for three-phase motors from 0.37 to 630 kW

Catalogue

September **2011**

All technical information about products listed in this catalogue are now available on:
www.schneider-electric.com

Browse the “product data sheet” to check out :

- characteristics,
- dimensions,
- curves, ...
- and also the links to the user guides and the CAD files.

1 From the home page, type the model number* into the “Search” box.

* type the model number without any blank, replace “●” by “*”

2 Under “All” tab, click the model number that interests you.

3 The product data sheet displays.

Example : Zelio Time data sheet

Zelio Time-RE 7 / RE 8 / RE 9
Timer relays that are simply ingenious

RE7YA12BU
Zelio Time RE7 industrial timing relay - 2 C/O - 22.5 mm - time delay type: Ot - supply: 110...240 V AC, - supply: 42...48 V AC/DC - range: 0.85...1.1 Us

range of product	Zelio Time
product or component type	industrial timing relay
discrete output type	relay
width pitch dimension	22.5 mm
contacts type and composition	2 C/O
component name	RE7
contacts material	90/10 silver nickel contacts
time delay type	Ot
time delay range	0.05 s...300 h
[Ui] rated supply voltage	24 V AC/DC 50/60 Hz 110...240 V AC 50/60 Hz 42...48 V AC/DC 50/60 Hz
product weight	0.15 kg
voltage range	0.85...1.1 Us
tightening torque	0.6...1.1 N.m
CAD overall width	22.5 mm
CAD overall height	78 mm
CAD overall depth	80 mm

Wood-working machine application

Applications

With its different types of motor control and numerous integrated functions, the Altivar 71 range of variable speed drives meets the most stringent requirements.

It is suitable for the most demanding drive systems:

- Torque and speed accuracy at very low speed, high dynamic performance with Flux Vector Control with or without sensor
- Extended frequency range for high-speed motors
- Parallel connection of motors and special drives using the voltage/frequency ratio
- Static speed accuracy and energy saving for open-loop synchronous motors
- Smooth flexibility for unbalanced machines with the ENA (ENergy Adaptation) System.

In conjunction with the wide voltage range for a 690 V ~ line supply, the Altivar 71 drive's advanced functions boost performance levels and make machines more versatile so they can be used for a large number of applications.

Hoisting

- Brake control adapted for translational, hoisting and slewing movements
- Load measurement using weight sensor
- High-speed hoisting
- Brake feedback management
- Limit switch management
- Slack sling

Handling

- Very quick response times on transmission of a command: 2 ms (± 0.5 ms)
- Reference via pulse train or differential analog input
- Control via the principal communication networks
- Position control via limit switches with time optimization at low speed
- Multiple parameter settings via parameter set switching

Packaging

- Up to 50 Hz of the bandwidth
- Very quick response times on change of reference: 2 ms (± 0.5 ms)
- Control via integrated CANopen machine bus
- Position control via limit switches

Textile machines

- High resolution of the digital speed reference (1/32,000)
- Speed accuracy assured by use of synchronous motor, irrespective of load
- High bandwidth
- Spooling function
- Connection to common DC bus
- Control of both asynchronous and synchronous motors supported
- High-performance speed loop

Wood-working machines

- Operation up to 1600 Hz
- Fastest possible controlled stop on loss of line supply
- Control via integrated CANopen machine bus
- Protection of motor against overvoltages

Process machinery

- PID regulator
- High-resolution references
- Speed or torque control
- Connection to the principal communication networks
- Separate control section power supply
- Braking unit via re-injection to the line supply
- Connection to common DC bus

An extensive range with a wide selection of options

An extensive and versatile offer

The Altivar 71 range of variable speed drives covers a wide range of motor power ratings from 0.37 kW to 630 kW with five types of power supply:

- 200...240 V single-phase, 0.37 kW to 5.5 kW, IP 20 (**ATV 71H...M3**)
- 200...240 V three-phase, 0.37 kW to 75 kW, IP 20 (**ATV 71H...M3** and **ATV 71H...M3X**)
- 380...480 V three-phase, 0.75 kW to 500 kW, IP 20 (**ATV 71H...N4**)
- 500...600 V three-phase, 1.5 kW to 7.5 kW, IP 20 (**ATV 71H...S6X**)
- 500...690 V three-phase, 1.5 kW to 630 kW, IP 20 (**ATV 71H...Y**)

This range can be used for controlling asynchronous motors in sensor/sensorless flux vector control mode.

At 200...240 V ~ and 380...480 V ~, there is a special version available that can be used for controlling synchronous motors with sinusoidal electromotive force when there is speed feedback. Control of asynchronous motors is still supported (see pages 22 and 52). All the options supported by the Altivar 71 range of variable speed drives are also available with this version when an identical rating is used.

The Altivar 71 drive integrates the Modbus and CANopen protocols as standard, as well as numerous functions. These functions can be extended using communication option cards (see page 58), I/O extension cards, an encoder interface or a Controller Inside programmable card (see pages 52 to 57).

External options such as braking resistors, resistance braking units, chokes and filters complete the offer (see page 15).

Eco-friendly and energy-saving

The Altivar 71 drive has been designed to generate significant energy savings in industrial processes, by offering options that can reduce line interference (DC chokes, line chokes, passive filters, Active Front End (AFE), etc.). It has been designed as an eco-friendly product (using 90% recyclable materials, compliant with environmental standard ISO 14040). It is RoHS-compliant.

Compliance with international standards and certifications

The entire range conforms to international standards IEC/EN 61800-5-1, IEC/EN 61800-2, IEC/EN 61800-3, is UL, CSA, DNV, C-Tick, NOM 117 and GOST certified, and has been developed to meet the requirements of directives regarding the protection of the environment (RoHS, WEEE, etc.) as well as those of European Directives (CE mark).

Functional safety and ATEX applications

The Altivar 71 drive features a Power Removal safety function that is designed to ensure motor stopping and prevent accidental restarts. This safety function means that the drive can be installed as part of the safety system for an Electrical/Electronic/Programmable Electronic control system relating to the safety of a machine or industrial process.

It meets the requirements of category 3 of the ISO 1384 machine safety standard, SIL 2 of IEC/EN 61508 and standard IEC/EN 61800-5-2 which covers the functional safety requirements of power drive products.

The Power Removal safety function also enables the Altivar 71 drive to offer protection for motors installed in explosive atmospheres (ATEX certification). Please refer to the ATEX guide which is available on our website www.schneider-electric.com.

Electromagnetic compatibility

Reducing current harmonics and observing requirements in respect of electromagnetic compatibility were considered right from the design stage.

The incorporation of EMC filters in **ATV 71H...M3**, **ATV 71...N4**, **ATV 71...Y** and **ATV 71P...N4Z** drives and the recognition of EMC requirements facilitates installation and provides an economical means of ensuring machines receive the CE mark.

ATV 71H...M3X and **ATV 71H...S6X** drives have been designed without an EMC filter. Filters are available as an option and can be installed by the customer to reduce the level of emissions (see page 84).

Appropriate solutions for each environment

The IP 20 Altivar 71 range of variable speed drives includes numerous different versions. It can therefore offer solutions in a wide variety of fields and in very harsh environments. It is designed to adapt perfectly to your needs with ready-to-use or modular solutions.

Versions with IP 54 degree of protection for difficult environments

To meet the requirements of applications in difficult environments (dusty, humid, etc.), drives can be supplied on their own or inside a floor-standing enclosure:

- A drive version with IP 54 degree of protection (see page 19):
 - at 380...480 V ~, 0.75 kW to 75 kW (**ATV 71W...N4**)
- A drive version with IP 54 degree of protection featuring a Vario switch disconnecter (see page 19):
 - at 380...480 V ~, 0.75 kW to 75 kW (**ATV 71E5...N4**)
- A drive version ready-assembled in an IP 54 floor-standing enclosure (see pages 104 and 105). The offer covers motor power ratings from 90 kW to 630 kW (**ATV 71EXS5...N4**, **ATV 71EXS5...N** and **ATV 71EXS5...Y**).
- A drive version ready-assembled in an IP 23 or IP 54 floor-standing enclosure (see pages 106 to 109). The offer covers motor power ratings from 500 kW to 2000 kW (**ATV 71EXA...N**).

The **ATV 71EXS5...N** and **ATV 71EXA...N** products have been designed for easy setup in highly polluted environments and, in particular, to ensure optimum enclosure ventilation by keeping the control and power air circuits separate. They include a standard version and a modular version.

- A preassembled kit for creating an IP 54-certified floor-standing enclosure (see pages 102 and 103). This straightforward and cost-effective solution, which is available by quoting a single reference, provides you with all the mechanical components you need to create an IP 54 floor-standing enclosure (**VW3 A9 541...VW3 A9 551**). This product has been designed for compatibility with IP 20 Altivar 71 drives, 90 kW to 500 kW at 380...480 V ~ (**ATV 71HD90N4...HC50N4**). It includes a standard version and a modular version.

Water-cooled versions for environments requiring greater ruggedness

With their internal water-cooled system, Altivar 71Q (**ATV 71Q...N4** and **ATV 71Q...Y**) drives represent the optimum solution for applications in which rugged versions are essential. The integrated water-cooled system circuit can dissipate heat at its source and hence offers optimum integration of the whole electrical control system.

85% of drive thermal losses are evacuated by this system, which also avoids the need to install an expensive air conditioning system.

The Altivar 71Q offer is also perfectly suited to frequent start-up applications. See pages 18 and 21.

Version for industrial environments and infrastructures

The following product is available to facilitate setup in industrial environments and infrastructure contexts (tunnels, treatment plants, etc.):

- A drive version ready-assembled in an IP 23 or IP 54 compact floor-standing enclosure which covers motor power ratings from 90 kW to 630 kW (**ATV 71EXC...N**). It is available in a standard version or modular version. See pages 110 to 113.

Version for environments where no ventilation is permitted

The following product is available to meet the requirements of applications where the necessary degree of protection rules out the possibility of ventilation:

- A drive on base plate version providing IP 20 degree of protection:
 - at 380...480 V ~, 0.75 to 11 kW (**ATV 71P...N4Z**) (see page 18)

As the drive is not equipped with a fan as standard, a DC choke (see page 76) must be added in order to prevent overheating during operation.

ATV 71HU75N4 flush-mounted

ATV 71PU75N4Z in dust and damp proof enclosure

Mounting options

The Altivar 71 drive can be mounted in a variety of ways for integration in various devices.

Mounting outside enclosure

The standard version of the Altivar 71 (on heatsink) or the base plate version can be mounted directly on a wall without having to be installed inside an enclosure. UL Type 1 conformity can be achieved using kit **VW3 A9 2●●**, or IP 21 or IP 31 conformity with kit **VW3 A9 1●●** (see pages 28 and 29).

Flush-mounting in dust and damp proof enclosure

The Altivar 71 drive has been designed to optimize the size of enclosures (floor-standing, wall-mounted, etc.).

This type of flush-mounting can be used to reduce the size of enclosure required and to limit the temperature rise inside the enclosure:

- The power section, with IP 54 degree of protection, can be easily mounted outside the enclosure using kit **VW3 A9 5●●** for flush-mounting in a dust and damp proof enclosure (see page 26).

This type of mounting can lead to ambient temperatures of up to 60°C inside the enclosure without derating.

It may be necessary to use a control card fan kit **VW3 A9 4●●** appropriate for the drive rating in order to avoid hot spots (see page 25).

If the installation conditions require it, this version also allows side-by-side mounting (please consult our website www.schneider-electric.com).

Mounting in a dust and damp proof enclosure or on machine frame

The Altivar 71 drive on base plate supports two mounting options:

- In a dust and damp proof enclosure using kit **VW3 A9 80●** for dust and damp proof mounting (see page 27) which has been designed to dissipate heat via a heatsink mounted outside the enclosure
- On a machine frame, where the frame's earth allows the heat to be dissipated

Application-specific dialogue and configuration tools

Remote graphic display terminal

The Altivar 71 drive 1, except for the version on a base plate ATV71P...N4Z, is supplied with a remote graphic display terminal 2.

It is extremely user-friendly, offering quick and easy access to the drop-down menus and the most complex functions, online help screens, six languages installed as standard and others available via flash memory. Four configuration files can be stored.

It is customizable for the customer or the machine.

It can be mounted remotely on an enclosure door with IP 54 or IP 65 degree of protection on IP 20 drives, or built-in on IP 54 drives.

The most complex functions are easily accessible thanks to advanced functions on the display unit.

Up to 15 kW at 200...240 V ~ and 75 kW at 380...480 V ~, the Altivar 71 drive can be ordered without a remote graphic display terminal; it is then only equipped with the integrated terminal.

SoMove setup software 3

SoMove setup software for PC is used to configure, adjust and debug the Altivar 71 drive with the Oscilloscope function and also for maintenance of this drive, as for all other Schneider Electric drives and starters. See page 160.

SoMove Mobile software 4

SoMove Mobile software is particularly suitable for maintenance operations. It can be used to edit the drive parameters from a mobile phone, save the configurations, import them from a PC or export them to a PC via a Bluetooth wireless connection 5. See page 160.

Simple Loader and Multi-Loader programming tools

The Simple Loader tool enables one powered-up drive's configuration to be duplicated on another powered-up drive.

The Multi-Loader tool enables a number of configurations from a PC or drive to be copied and duplicated on another drive; the Altivar 71 drives do not need to be powered up. See page 161.

Quick programming tools

Macro-configuration

The Altivar 71 drive offers quick and easy programming using macro-configurations corresponding to different applications or uses: start-stop, handling, hoisting, general use, connection to communication networks, PID regulator, master/slave applications (for synchronous motors with speed feedback).

Each of these configurations is still fully modifiable.

Simply Start menu

The Simply start menu can be used to ensure that the application is working correctly, maximize motor performance and ensure motor protection.

The architecture, the hierarchical parameter structure and the direct access functions all serve to make programming quick and easy, even for the more complex functions.

Built-in maintenance, monitoring and diagnostic functions

The Altivar 71 has numerous built-in maintenance, monitoring and diagnostic functions:

Examples of functions:

- Built-in drive test functions with diagnostic screen on the remote graphic display terminal
- I/O maps
- Communication maps for the different ports
- Oscilloscope function that can be viewed using the SoMove setup software
- Management of the drive installed base via microprocessors with flash memory
- Remote use of these functions by connecting the drive to a modem via the Modbus port
- Identification of all the drive's component parts as well as the software versions
- Error logs with display of the value of up to 16 variables on occurrence of a fault
- Display terminal languages loaded in the flash memory
- A message of up to 5 lines of 24 characters can be stored in the drive

A wide range of options

The numerous options designed for the Altivar 71 drive make it highly flexible and extremely easy to adapt to applications.

Option cards

The Altivar 71 drive 1 can integrate up to three different option cards simultaneously, including:

- Two of the following cards:
 - I/O extension cards 2 (see page 53)
 - Communication cards 2 (Modbus TCP Daisy Chain, Modbus/Uni-Telway, EtherNet/IP, DeviceNet, PROFIBUS DP, etc.) (see page 58)
 - Controller Inside programmable card 2 to adapt the variable speed drive to specific applications (see page 54)
- One of the following encoder interface cards 3: with RS 422-compatible differential outputs; with open collector outputs (NPN); with push-pull outputs; resolver; with SinCos, SinCos Hiperface®, EnDat®, or SSI universal outputs; with RS 422-compatible differential outputs plus encoder emulation (RS 422 ESIM) (see page 52)

Other options

Numerous other external options can be combined with the Altivar 71:

- Braking units and resistors (standard or hoist-specific) (see pages 64 to 69)
- Network braking units (see pages 70 to 71)
- Active Front End (AFE) to use the drive to return energy to the line supply or when the installation requires particularly low harmonic levels; in addition it operates on unstable line supplies (see pages 72 to 75)
- DC chokes, line chokes and passive filters to reduce harmonic currents (see pages 76 to 83)
- Additional EMC input filters to reduce conducted emissions on the line (see pages 84 and 85)
- Motor chokes and sinus filters for long cable runs or to remove the need for shielding (see pages 86 to 91)

Note: Please refer to the compatibility summary tables to determine which options are available for individual drives (see pages 40 to 51).

Integration into PLC architectures

The Altivar 71 drive has a built-in combined Modbus or CANopen port for quick, accurate motion control, adjustment, supervision and configuration. A second port is available for connecting a Magelis terminal for machine dialogue.

The Altivar 71 drive can be integrated into most networked industrial applications using the communication option cards.

The following protocols are available:

Modbus TCP Daisy Chain, Modbus/Uni-Telway, EtherNet/IP, DeviceNet, PROFIBUS DP V0 and V1, INTERBUS and CC-LINK (see pages 58 to 63).

The option of powering the control section separately enables communication (monitoring, diagnostics) to be maintained even if there is no power supply to the control section.

The Controller Inside programmable card transforms the drive into an automation island. This is used to adapt the drive to specific applications quickly and progressively, by decentralizing the control system functions (pages 54 to 57):

- The card has its own I/O; it can also manage those of the drive and an I/O extension card.
- It contains onboard application programs developed in IEC/EN 61131-3 languages, which reduce the control system response time.
- Its CANopen master port enables control of other drives and dialogue with I/O modules and sensors.

Dimensions (overall)

Drives	W x H x D mm
ATV 71H037M3...HU15M3	130 x 230 x 175
ATV 71HU22M3...HU40M3	155 x 260 x 187
ATV 71HU55M3	175 x 295 x 187
ATV 71HU75M3	210 x 295 x 213
ATV 71HD11M3X, HD15M3X	230 x 400 x 213
ATV 71HD18M3X, HD22M3X	240 x 420 x 236
ATV 71HD30M3X...HD45M3X	320 x 550 x 266
ATV 71HD55M3X	320 x 920 x 377
ATV 71HD75M3X	360 x 1022 x 377

(1) These values are given for a nominal switching frequency of 4 kHz up to ATV 71HD15M3X or 2.5 kHz for ATV 71HD18M3X...HD75M3X drives for use in continuous operation.

The switching frequency is adjustable from 1...16 kHz up to ATV 71HD45M3X and from 1...8 kHz for ATV 71HD55M3X and ATV 71HD75M3X drives. Above 2.5 or 4 kHz, depending on the rating, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on our website www.schneider-electric.com).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Variants available (see page 22).

(4) A line choke must be used (see page 78).

(5) Drive supplied without EMC filter. EMC filters are available as an option (see page 84).

(6) Drive supplied without EMC mounting plate. It is included in the UL Type 1 or IP 31 conformity kit, which must be ordered separately (see pages 28 and 29).

Note: Consult the summary tables of possible drive, option and accessory combinations (see page 40).

(1) These values are given for a nominal switching frequency in continuous operation:

- 4 kHz for ATV 71P●●●N4Z

- 2.5 kHz for ATV 71Q●●●N4

The switching frequency is adjustable from:

- 1...16 kHz for ATV 71P●●●N4Z

- 2.5...8 kHz for ATV 71Q●●●N4

Above 4 kHz, the drive will reduce the switching frequency automatically in the event of excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on our website www.schneider-electric.com).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) Variants available (see page 22).

(4) A DC choke must be used (see page 76).

(5) ATV 71P●●●N4Z drives supplied with a plate for EMC mounting and a thermal liner for mounting on the machine frame (see page 27).

Note: Consult the summary tables of possible drive, options and accessory combinations on pages 42 and 46.

ATV 71HU22Y...HD30Y	240 x 420 x 236
ATV 71HD37Y...HD90Y	320 x 630 x 290
ATV 71HC11Y...HC16Y	340 x 1190 x 377
ATV 71HC20Y...HC31Y	595 x 1190 x 377
ATV 71HC40Y...HC63Y	1120 x 1390 x 377

(1) These values are given for a nominal switching frequency of 4 kHz for ATV 71HU●●S6X and for ATV 71 HU22Y...HD30Y or 2.5 kHz for ATV 71HD37Y...HC63Y for use in continuous operation.

The switching frequency is adjustable from 2.5...6 kHz for ATV 71HU●●S6X and for ATV 71HU22Y...HD30Y, and 2.5...4.9 kHz for ATV 71HD37Y...ATV 71HC63Y drives.

Above 2.5 kHz or 4 kHz, depending on the rating, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current (see derating curves on our website www.schneider-electric.com).

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.

(3) The maximum transient current for:

- 60 seconds is equal to 150% of the maximum continuous current

- 2 seconds is equal to 165% of the maximum continuous current

(4) Variants available (see page 22).

(5) Line choke mandatory for ATV 71HC11Y...HC63Y drives, unless a special transformer is used (12-pulse). The line choke must be ordered separately (see page 78).

(6) Drive supplied without EMC mounting plate. It is included in the UL Type 1 or IP 31 kit, which must be ordered separately (see pages 28 and 29).

Note: Consult the summary tables of possible drive, option and accessory combinations (see pages 46 and 48).

- 60 seconds is equal to 150% of the maximum continuous current

- 2 seconds is equal to 165% of the maximum continuous current

Note: Consult the summary tables of possible drive, option and accessory combinations (see page 48).

Variable speed drive for synchronous motor with speed feedback

The drives are supplied as standard for asynchronous motors with or without sensor feedback.

ATV 71H075N4...HD75N4 drives can control not only those motors included in the standard offer, but also synchronous motors with speed feedback, by adding **383** at the end of the reference.

Example: ATV 71H075N4 becomes **ATV 71H075N4383**.

See page 52 for the available encoder interface cards.

Variable speed drive with additional power supply

When the total power consumption does not exceed 200 mA, ATV 71W...N4 drives can be supplied with an additional 24 V $\pm$ power supply, which allows additional consumption of 250 mA.

In this case, add **A24** at the end of the reference. Example: ATV 71W075N4 becomes **ATV 71W075N4A24**.

Variable speed drive in a reinforced version

This variant enables variable speed drives to operate in difficult ambient pollution conditions and complies with standard IEC60721-3-3 class 3C2.

ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4, ATV 71H...Y and ATV 71W...N4A24 drives are supplied as standard in a reinforced version.

To order ATV 71H...M3 and ATV 71H075N4...HD75N4 variable speed drives in a reinforced version, add **S337** at the end of the reference.

Example: ATV 71H075M3 becomes **ATV 71H075M3S337**.

To order ATV 71HD11M3X...HD45M3X drives in this version, add **337** at the end of the reference.

Example: ATV 71HD11M3X becomes **ATV 71HD11M3X337**.

In the reinforced version, the variable speed drive is supplied with a remote graphic display terminal.

Variable speed drive with integrated terminal

Except for ATV 71P...N4Z drives on base plates supplied with a integrated display terminal, all drives come with a remote graphic display terminal and an integrated terminal as standard.

ATV 71H037M3...HD15M3X and ATV 71H075N4...HD75N4 drives can be ordered without a remote graphic display terminal. They will then have the integrated terminal only. In this case, add **Z** at the end of the reference.

Example: ATV 71H075M3 becomes **ATV 71H075M3Z**.

To order ATV 71H075N4383...HD75N4383 drives without a graphic display terminal, please contact our Customer Care Centre.

Variable speed drive without DC choke

ATV 71HD90N4...HC50N4 drives are supplied as standard with a DC choke which must be used when connecting drives to the three-phase supply.

They can be ordered without a DC choke for connections to the DC bus or when using a line choke (see page 78), by adding **D** at the end of the reference.

Example: ATV 71HD90N4 becomes **ATV 71HD90N4D**.

Variable speed drive with EMC plate conforming to NEMA type 12 standard

ATV 71W...N4 drives are supplied as standard with a European version EMC plate. To order drives with an EMC plate conforming to NEMA type 12 standard, add **U** at the end of the reference. This plate is supplied without a drill hole.

Example: ATV 71W075N4 becomes **ATV 71W075N4U**.

Note:

- ATV 71H037M3...HD45M3X, ATV 71H075N4...HD75N4, ATV 71H...S6X and ATV 71HU22Y...HD90Y drives are supplied as standard with a European version EMC plate.

- ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4, ATV 71P...N4Z and ATV 71HC11Y...HC63Y drives are supplied as standard without a plate for EMC mounting.

Depending on the reference, the European version EMC plate is included in the UL Type 1 or IP 31 kit (see pages 28 and 29).

ATV 71HD11M3X drive
mounted on DNV kit VW3 A9 625

ATV 71HD45N4 drive
mounted on DNV kit VW3 A9 628

ATV 71H...Y drive
mounted on DNV kit VW3 A9 64

DNV kit

This kit enables Altivar 71 variable speed drives to satisfy the requirements of the DNV certification body.

For the following variable speed drives:

- ATV 71H...M3
- ATV 71HD11M3X...HD45M3X
- ATV 71H075N4...HD75N4

the kit includes:

- Shock-absorbing mounts 1
- An additional EMC input filter 2
- EMC filter supports 3
- Fixing accessories

It is mounted on the back of the variable speed drive on the additional EMC filter supplied with the DNV kit as standard.

DNV shock-absorbing mounts

These mounts **1** are mounted on ATV 71H075N4...HD37N4 and ATV 71HU22Y...HD90Y drives.

They are supplied with the fixing accessories necessary for fixing the shock-absorbing mounts on the back of the drive.

(1) A line choke must be used which must be ordered separately (see page 78).

(2) An EMC filter must be used which must be ordered separately (see page 84).

(3) If using the DNV kit, do not mount the DC choke supplied as standard with the drive.

(4) When using a DNV kit, the variable speed drive and the transformer for the fan are mounted separately. Please refer to the dimensions on our website www.schneider-electric.com.

DNV shock-absorbing mounts

Control card fan kit

Control card fan kit

(for ATV 71H●●●● drives on heatsink)

This kit is required for ATV 71HD18M3X...HD45M3X, ATV 71HD22N4...HD75N4 and ATV 71HU22Y...HD90Y drives in order that they can operate at ambient temperatures between 50°C and 60°C, for example if they are mounted in an IP 54 enclosure. The circulation of air around the electronic cards prevents the formation of hot spots.

To ascertain the derating to be applied to the drive nominal current, please refer to the curves on our website www.schneider-electric.com.

The kit 1 is mounted on the upper part of the drive. It is powered by the drive and includes:

- A fan subassembly
- Fixing accessories
- A manual

Adaptor for 115 V ~ logic inputs

This adaptor is used to connect 115 V ~ logic signals to the logic inputs on the drive or an I/O extension card.

7 logic inputs with capacitive impedance at 60 Hz of 0.22 µF are available for connecting the logic signals:

- Max. current: 200 mA
- Response time: 5 ms to change from state 0 to state 1, 20 ms to change from state 1 to state 0
- Logic state 0 for a voltage below 20 V, logic state 1 for a voltage between 70 V and 132 V

The power supply must be provided by a 115 V external power supply (min. 70 V, max. 132 V).

ATV 71HU75N4 flush-mounted drive

538947

ATV 71HC28N4D flush-mounted drive

Kit for flush-mounting in a dust and damp proof enclosure (for ATV 71H... drives on heatsink)

This kit can be used to mount the power section of the drive outside the enclosure (IP 54 degree of protection), which reduces the power dissipated into the enclosure (1).

It is available for ATV 71H...M3, ATV 71H...M3X, ATV 71H075N4...HC28N4, ATV 71HD90N4D...HC28N4D and ATV 71HU22Y...HC31Y drives.

With this type of mounting, the maximum internal temperature in the enclosure can then reach 60°C without it being necessary to derate the drive current.

Between 50°C and 60°C, a control card fan kit must be used for ATV 71HD18M3X...HD45M3X, ATV 71HD22N4...HD75N4, ATV 71H...S6X and ATV 71HU22Y...HD90Y drives to prevent hot spots (see page 25).

The back of the enclosure must be drilled and cut out for this type of mounting.

The kit includes:

- A metal frame of the right size for the drive rating
- Corner pieces
- Seals
- A fan support (this can be used to move the fans so that they can be accessed from the front of the enclosure)
- Fixing accessories
- A manual

(1) Power dissipated in the enclosure for dust and damp proof flush-mounting: please consult our website www.schneider-electric.com.

(2) Drives supplied as standard with a DC choke. In this case, cut out and drill the enclosure for the choke.

(3) Drives supplied without DC choke.

(4) Drives supplied as standard with a transformer for the fan. In this case, cut out and drill the enclosure for the transformer.

ATV 71PU22N4Z drive
in a dust and damp proof enclosure

Kit for mounting in a dust and damp proof enclosure (for ATV 71P●●●N4Z drives on base plate)

This kit can be used to mount a drive "on a base plate" inside a dust and damp proof enclosure (IP 54 degree of protection). Heat is dissipated via a heatsink mounted outside the enclosure.

This type of mounting simply requires that a hole be drilled in the enclosure at the same level as the drive fixing holes used to mount the heatsink.

The kit includes:

- A heatsink **1**
- A thermal liner **2**
- Sealing joints
- A manual

Enclosure characteristics

The steel used for the floor-standing or wall-mounted enclosure which is to house the drive must meet the following requirements:

- Thickness 1.5 to 3 mm
- Steel: Stainless or paint-finished smooth steel
- Heat-treated epoxy paintwork (lacquer finish not permitted), max. depth 70 µm, fine or medium texture

IP 21 conformity kit

IP 21 or IP 31 conformity kit (mounting outside the enclosure)

When the drive is mounted directly on a wall outside the enclosure, this kit can be used to ensure IP 21 or IP 31 degree of protection when connecting the cables with a cable gland.

The shielding is connected inside the kit.

For ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4, ATV 71P●●●N4Z, ATV 71H●●●S6X and ATV 71HU22Y...HD90Y drives, the kit conforms to IP 21 degree of protection and includes:

- All the mechanical fittings **1** including a drilled plate **2** for attaching the cable glands **3**
- Fixing accessories
- A manual

For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 and ATV 71HC11Y...HC63Y drives, the kit conforms to IP 31 degree of protection and includes:

- An IP 54 casing **4** used to maintain the IP 54 degree of protection for the power section
- An EMC plate with cable clamps **5**
- An IP 31 cover **6**
- Fixing accessories
- A manual

Substitution kit VW3 A9 304

Substitution kit for Altivar 58 or Altivar 58F drives

This kit **1** is used to install an Altivar 71 drive in the place of an Altivar 58 or Altivar 58F drive using the same fixing holes. It includes the mechanical adaptors required for mounting.

High torque application (170% Tn)

Remote graphic display terminal

Remote graphic display terminal

(this display terminal can be supplied with the drive or ordered separately)

This display terminal is attached to the front of the drive. It includes the integrated terminal for drives ordered without a graphic display terminal (see page 22).

It can be:

- Used remotely in conjunction with the appropriate accessories (see below)
- Connected to several drives using multidrop link components (see page 33)

It is used to:

- Control, adjust and configure the drive
- Display the current values (motor, input/output values, etc.)
- Save and download configurations; 4 configuration files can be saved.

The maximum operating temperature of the terminal is 60°C and it has IP 54 protection.

Description

- 1 Graphic display unit:
 - 8 lines, 240 x 160 pixels
 - large digit display that can be read from 5 m away
 - bar chart display
- 2 Assignable function keys F1, F2, F3, F4:
 - dialogue functions: direct access, help screens, navigation
 - application functions: Local/Remote, preset speed
- 3 STOP/RESET key: local control of motor stopping/fault clearing
- 4 RUN key: Local control of motor operation
- 5 Navigation button:
 - Press: Saves the current value (ENT)
 - Turn ±: Increases or decreases the value, or goes to the next or previous line
- 6 FWD/REV key: Reverses the direction of rotation of the motor
- 7 ESC key: Aborts a value, a parameter or a menu to return to the previous selection

Note: Keys 3, 4 and 6 can be used to control the drive directly.

Remote graphic display terminal accessories

The following accessories are available:

- A remote mounting kit 2 for mounting on an enclosure door with IP 54 degree of protection, including:
 - All the mechanical fittings
 - Fixing accessories

- A transparent door 3 which attaches to the remote mounting mechanism to achieve IP 65 degree of protection

- A preassembled cordset 4 with two RJ45 connectors for connecting the graphic display terminal to the Altivar 71 drive (1, 3, 5 or 10 metres long)

- A female/female RJ45 adaptor 5 for connecting the graphic display terminal VW3 A1 101 to the remote-mounting cordset VW3 A1 104 R●●●

Option: Configuration tools

Configuration with SoMove Mobile software for mobile phones via Bluetooth®

SoMove setup software with Modbus-Bluetooth® adaptor for PC

SoMove Mobile software for mobile phones (1)

SoMove Mobile software converts any compatible mobile phone (1) into a remote graphic display terminal, offering an identical Human-Machine Interface.

Particularly suitable for on-site or remote maintenance operations, SoMove Mobile software can be used to print out and save configurations, import them from a PC and export them to a PC or a drive equipped with the Modbus-Bluetooth® adaptor (TCSW AAC13FB) via the Bluetooth® wireless link.

SoMove Mobile software and drive configuration files can be downloaded from our website www.schneider-electric.com.

Description	For drives	Reference	Weight kg
SoMove Mobile software for mobile phones (1)	ATV 71●●●●●●	—	—

SoMove setup software

Presentation

SoMove setup software for PC is used to configure, adjust and debug using the Oscilloscope function, as well as for maintenance, like all Schneider Electric drives and starters.

The software can use a direct USB/RJ45 cable link or communicate via a Bluetooth® wireless link with the drive equipped with the Modbus-Bluetooth® adaptor (TCSW AAC13FB).

It is compatible with Altivar 71 drives from software version 1.6 upwards.

For presentation, description and references, see page 36.

(1) SoMove Mobile software requires a mobile phone with minimum features; please consult our website www.schneider-electric.com.

SoMove start page

Example of connecting SoMove software to an ATV 12 drive

SoMove control panel

Presentation

SoMove is user-friendly setup software for PC designed for configuring the following Schneider Electric motor control devices:

- ATV 12, ATV 312, ATV 31, ATV 32, ATV 61 and ATV 71 drives
- ATS 22 starters
- TeSys U starter-controllers
- TeSys T motor management system
- Lexium 32 servo drives

SoMove software incorporates various functions for the device setup phases, such as:

- Configuration preparation
- Start-up
- Maintenance

To facilitate setup and maintenance, SoMove software can use a direct USB/RJ45 cable link or a Bluetooth® wireless link.

SoMove software is also compatible with the Multi-Loader configuration tool and SoMove Mobile software for mobile phones.

These tools can save a significant amount of time when loading, duplicating or editing configurations on a device.

SoMove software and all the DTMs (Device Type Managers) associated with the devices can be downloaded from our website www.schneider-electric.com.

Functions

Configuration preparation in disconnected mode

SoMove software has a genuine disconnected mode which provides access to all the device parameters. This mode can be used to generate the device configuration. The configuration can be saved, printed and exported to office automation software.

SoMove software also checks the consistency of the parameters, validating the configurations created in disconnected mode.

A large number of functions are available in disconnected mode, in particular:

- The device configuration software wizard
- The configuration comparison function
- Saving, copying, printing and creating configuration files for export to Multi-Loader, SoMove Mobile or Microsoft Excel® tools, and sending configurations by e-mail

Setup

When the PC is connected to the device, SoMove software can be used for:

- Transferring the generated configuration onto the device
- Adjustment and monitoring, which includes such functions as:
 - The oscilloscope
 - Display of communication parameters
- Easy control via the control panel user interface
- Saving the final configuration

Maintenance

In order to simplify maintenance operations, SoMove software can be used to:

- Compare the configuration of a device currently being used with a configuration saved on the PC
- Transfer a configuration to a device
- Compare oscilloscope curves
- Save oscilloscope curves and faults

SoMove oscilloscope function

SoMove Safety function

Functions (continued)

User interface

SoMove software provides fast, direct access to all information on the device via five tabs:

- **My Device:** Displays all the device information (type, reference, software versions, option cards, etc.)
- **Parameters:** Displays all the device adjustment parameters, shown in a table or in the form of diagrams
- **Faults:** Displays a list of the faults that may be encountered with the device, the fault log and any current faults or alarms
- **Monitoring:** Provides a realtime display of the device status, its I/O and all the monitoring parameters. It is possible to create your own control panel by selecting your parameters and how they are to be represented.
- **Oscilloscope:** Provides a high-speed oscilloscope (for recording traces in the device) or low-speed oscilloscope (for recording traces in the software for devices that do not have an integrated oscilloscope)

SoMove's user interface automatically adapts to the specific configured device by offering additional tabs:

- **Safety:** For configuring the Safety functions on ATV 32 variable speed drives and Lexium 32 servo drives. It can also be used to:
 - Display the I/O
 - Compile and print a report
- **ATVLogic:** For accessing the ATV 32 drive's programmable function blocks. It can also be used to:
 - Develop a program and transfer it to the drive
 - Display and debug the program already on the drive
- **Auto-tuning:** For accessing the servo control settings for the three different operating modes of the Lexium 32 servo drive's auto-tuning function:
 - Automatic mode for quick setup, designed for simple applications
 - Semi-automatic mode for quick setup, with the option of optimizing the servo drive/servo motor combination (access to the mechanical and dynamic behaviour parameters)
 - Expert mode for optimizing the adjustment parameters, designed for complex applications

Connections

Modbus serial link

The PC running SoMove software can be connected directly via the RJ45 connector on the device and the USB port on the PC using the USB/RJ45 cable.

See the product references on page 38.

Bluetooth® wireless link

SoMove software can communicate via Bluetooth® wireless link with any Bluetooth® enabled device.

If the device is not Bluetooth® enabled, use the Modbus-Bluetooth® adaptor. This adaptor is connected to the terminal port or the Modbus network port on the device. It has a 20 m range (class 2).

If the PC does not have Bluetooth® technology, use the USB-Bluetooth® adaptor.

See the product references on page 38.

 Combination possible

 Combination not possible

(1) Maximum combination involving two types of card is 2.

Presentation

Encoder interface card VW3 A3 401

Encoder interface cards are used for Flux Vector Control operation with sensor (FVC mode) for asynchronous motors, or for Vector Control operation with speed feedback (FSY mode) for synchronous motors.

They improve drive performance irrespective of the motor load state:

- Zero speed torque
- Accurate speed regulation
- Torque accuracy
- Shorter response times on a torque surge
- Improved dynamic performance in transient state

For asynchronous motors, in the other control modes (voltage vector control, voltage/frequency ratio), encoder interface cards improve static speed accuracy.

Depending on the model, encoder interface cards can also be used for machine safety, irrespective of the control type:

- Overspeed detection
- Load slipping detection

They can also transmit a reference provided by the encoder input to the Altivar 71.

This use is specific to synchronizing the speed of several drives. These two functions are available for encoder interface cards VW3 A3 401 to VW3 A3 407 and VW3 A3 411.

Six types of card are available depending on the encoder technology (incremental or absolute):

- RS 422 compatible differential outputs
- Open collector outputs (NPN)
- Push-pull outputs
- Resolver (1)
- SinCos, SinCos Hiperface®, EnDat® or SSI output (1)
- RS 422 compatible differential outputs with encoder emulation (RS 422 ESIM)

The RS 422 ESIM (Encoder SIMulation) encoder interface card is used to indicate the position and speed of the motor to a motion controller via the RS 422 interface ESIM output.

It is also used to establish a master/slave relationship between two Altivar 71 drives.

The Altivar 71 variable speed drive can only take one encoder interface card. Please refer to the compatibility table on page 51.

The interface encoder card is inserted in a dedicated slot.

It is protected against short circuits and overloads.

(1) Card requires an ATV 71 H●●●N4383 drive (see page 22).

(2) To determine the complete encoder reference, please refer to the "Detection for automation solutions - OsiSense" catalogue or our website www.schneider-electric.com.

(3) The VW3 A3 402 card ensures compatibility between Altivar 68F drive applications and Altivar 71 drive applications.

Presentation

Extended I/O card VW3 A3 202

Altivar 71 variable speed drives can be adapted for more complex or extensive applications by installing I/O extension cards.

Two models are available:

- Card with logic I/O featuring:
 - 1 relay logic output ("C/O" contact)
 - 4 x 24 V $\overline{\text{---}}$ positive logic (Source) or negative logic (Sink) inputs
 - 2 x 24 V $\overline{\text{---}}$ open collector positive logic (Source) or negative logic (Sink) outputs
 - 1 input for 6 PTC probes (1)
- Card with extended I/O featuring:
 - 1 differential current analog input 0...20 mA
 - 1 software-configurable voltage analog input (0...10 V $\overline{\text{---}}$) or current (0...20 mA)
 - 2 software-configurable voltage analog outputs (± 10 V, 0...10 V $\overline{\text{---}}$) or current (0...20 mA)
 - 1 relay logic output
 - 4 x 24 V $\overline{\text{---}}$ positive logic (Source) or negative logic (Sink) inputs
 - 2 x 24 V $\overline{\text{---}}$ open collector positive logic (Source) or negative logic (Sink) outputs
 - 1 input for 6 PTC probes (1)
 - 1 frequency control input

The Altivar 71 variable speed drive can only take one I/O extension card with the same reference.

Please refer to the card compatibility table on page 51.

Variable speed drives

Altivar 71

Option: Controller Inside programmable card

Presentation

The Controller Inside programmable card is used to adapt the variable speed drive to specific applications by integrating control system functions.

Various predefined configurable applications are sold by Schneider Electric and its partners.

The PS 1131 software workshop is used for programming and debugging new applications, quickly and in an open-ended manner in accordance with standard IEC 61131-3.

It is not possible to transfer the program from the card to the PC, therefore know-how is protected.

A single Controller Inside programmable card can be installed in the Altivar 71 drive. It can be combined with another option card (I/O extension or communication). Please refer to the card compatibility table on page 51.

The Controller Inside programmable card features:

- 10 x 24 V $\overline{\text{V}}$ logic inputs, 2 of which can be used for 2 counters or 4 of which can be used for 1 incremental encoder and/or 3 counters
- 2 x 0...20 mA current analog inputs, impedance 500 Ω
- 6 x 24 V $\overline{\text{V}}$ open collector positive logic (Source) outputs
- 2 x 0...20 mA current analog outputs, impedance 500 Ω
- A master port for the CANopen machine bus, for controlling other drives and communication with I/O modules and sensors
- A PC port for programming with the PS 1131 software workshop

If the power consumption does not exceed 200 mA, the Controller Inside programmable card can be powered by the Altivar 71 drive. Otherwise, an external 24 V $\overline{\text{V}}$ power supply must be used.

ATV 71W...N4A24 drives incorporate a 24 V $\overline{\text{V}}$ power supply, allowing additional consumption of 250 mA.

The Controller Inside programmable card can also use:

- The drive I/O
- The I/O extension card I/O
- The encoder interface card points counter
- The drive parameters (speed, current, torque, $\varepsilon\tau\chi$.)

Description

- 1 RJ45 connector for connecting the PS1131 software workshop via an RS 485 serial link.
Connection to the PC is via a cable and RS 232/RS 485 converter included in the PC serial port connection kit, VW3 A8 106.
- 2 9-way male SUB-D connector for connection to the CANopen machine bus
- 3 Connector with removable screw terminals, 6 contacts at intervals of 3.81 for the 24 V $\overline{\text{V}}$ power supply and 4 logic inputs
- 4 3 connectors with removable screw terminals, 6 contacts at intervals of 3.81 for 6 logic inputs, 6 logic outputs, 2 analog inputs, 2 analog outputs and 2 commons
- 5 5 LEDs:
 - 1 to indicate the presence of the 24 V $\overline{\text{V}}$ power supply
 - 1 to indicate a program execution fault
 - 2 to indicate the CANopen bus communication status
 - 1 controlled by the application program

Variable speed drives

Altivar 71

Option: Controller Inside programmable card

Dialogue

Human-machine dialogue with the application programmed in the Controller Inside programmable card is possible using:

- The Altivar 71 graphic display terminal: The graphic terminal has a menu dedicated to the Controller Inside programmable card. This menu can be customized by the program depending on the application.
- A Magelis industrial HMI terminal, connected to:
 - The drive's Modbus port
 - The Modbus TCP network, if the drive is equipped with a Modbus TCP communication card

Any industrial HMI terminal which supports the Modbus protocol can be used to display and modify the Controller Inside programmable card parameters.

Master CANopen communication

The master CANopen port on the Controller Inside programmable card can be used to extend the I/O capacity and to control other CANopen slave devices.

Communication with a PLC

An Altivar 71 drive equipped with a Controller Inside programmable card integrates easily into complex architectures.

Regardless of which bus, network or serial link is being used (Modbus TCP, Modbus/Uni-Telway, PROFIBUS DP, INTERBUS, etc.), the PLC can communicate with the Controller Inside programmable card and the drive. The periodic variables can still be configured as required.

Clock

A clock backed up by a lithium battery makes it possible to keep a log of events. When the Controller Inside programmable card is installed in the drive, drive faults are automatically time and date-stamped without any special programming.

(1) Please refer to the "Modicon M340 Automation Platform" catalogue.

Variable speed drives

Altivar 71

Option: Controller Inside programmable card

PS 1131 software workshop

The PS 1131 software workshop conforms to international standard IEC/EN 61131-3 and includes all the functions for programming and setting up the Controller Inside programmable card.

It includes the CANopen configurator.

It is designed for Microsoft Windows® 98, Microsoft Windows® NT 4.0, Microsoft Windows® Millennium, Microsoft Windows® 2000 Professional and Microsoft Windows® XP operating systems.

It benefits from the user-friendly interface associated with these operating systems:

- Pop-up menus
- Function blocks
- Online help

The PS 1131 software workshop is available in both English and German.

The programming and debugging tools can be accessed via the application browser. This provides the user with an overview of the program and quick access to all the application components:

- Program editor
- Function blocks editor
- Variables editor
- Animation tables editor
- Runtime screens editor

Modular structured programming

The PS 1131 software workshop is used to structure an application into function modules consisting of sections (program code), animation tables and runtime screens.

Each program section has a name and is programmed in one of six available languages:

- Ladder Diagram (LD)
- Structured Text (ST)
- Grafset (SFC)
- Instruction List (IL)
- Function Block Diagram (FBD)
- Continuous Flow Chart (CFC)

To protect know-how or prevent any accidental modification, each section can be write-protected or read/write-protected.

Function blocks

The PS 1131 software workshop features pre-programmed function blocks which make up the standard library.

Exchanges with the drive are performed by a function block available in the standard library.

The software workshop also offers users the option of creating their own function blocks and thus creating a user library.

The user library is also a means of protecting the know-how contained in the algorithms, as it is possible to lock access to the user function blocks program.

Debugging tools

The PS 1131 software workshop offers a complete set of tools for debugging the application:

- Program execution for debugging (step-by-step execution, execution of a single cycle, etc.)
- Realtime animation of the program with automatic display of the variables
- Animation tables editor with the option to save tables
- Oscilloscope (monitoring up to 20 variables)
- Application runtime screens editor (graphic objects, messages, screen backgrounds, etc.)
- Simulation function for testing the program without using the drive

Example of Ladder Diagram language programming

Example of runtime screen

Variable speed drives

Altivar 71

Communication buses and networks

Integrated communication for Modbus and CANopen protocols

Presentation

The Altivar 71 drive has been designed to meet all the configuration requirements encountered within the context of industrial communication installations.

Integrated communication protocols

It includes Modbus and CANopen communication protocols as standard.

Two integrated communication ports enable direct access to the Modbus protocol:

- One RJ45 Modbus terminal port **1**, located on the drive front panel, which is used to connect a Human Machine Interface or one of the following configuration tools:
 - Remote graphic display terminal
 - Magelis industrial HMI terminal
 - SoMove setup software
 - Simple Loader and Multi-Loader configuration tools
- One RJ45 Modbus network port **2**, located on the drive's control terminals which is assigned to control and signalling by a PLC or by another type of controller. It can also be used to connect a terminal or the SoMove setup software.

The CANopen protocol can be accessed from the Modbus network port **2** via the daisy chain tap or the CANopen adaptor **3**. In this case, the terminal port **1** must be used to access the Modbus protocol.

The characteristics of the communication ports for Modbus and CANopen protocols are available on our website www.schneider-electric.com.

Optional communication cards

The Altivar 71 drive can also be connected to the following industrial communication buses and networks by adding one of the communication option cards:

- Modbus TCP Daisy Chain
- Modbus/Uni-Telway (this card provides access to additional functions, which complement those of the integrated ports (Modbus ASCII and 4-wire RS 485))
- EtherNet/IP
- DeviceNet
- PROFIBUS DP V0 and V1
- INTERBUS
- CC-LINK
- EtherCAT

The option of powering the control part separately enables communication to be maintained (monitoring, diagnostics) even if there is no power supply to the power part.

The main communication functions of Altivar 58 and Altivar 58F drives are compatible with the Altivar 71:

- Connection
- Communication services
- Drive behaviour (profile)
- Control and monitoring parameters
- Standard adjustment parameters

Communication module

Altivar 71 drives can also connect to the Fipio bus using the communication module which is available as an option (see page 63).

Configuration example on CANopen machine bus

Functions

All drive functions can be accessed via the network:

- Configuration
- Adjustment
- Control
- Monitoring

The Altivar 71 drive's advanced functions provide excellent interfacing flexibility. They enable the different control sources (I/O, communication networks, communication cards and HMI terminal) to be assigned to control functions that satisfy the requirements of numerous, extremely complex applications. Network configuration is simplified through the provision of configuration software (configurator for SyCon® networks, etc.).

For the integrated Modbus and CANopen ports and the communication cards for industrial applications, the Altivar 71 drive can be controlled:

- According to the CiA 402 profile
- According to the I/O profile, where control is as simple and adaptable as control via the I/O terminals

The DeviceNet card also supports CIP AC Drive and Allen-Bradley drive profiles; PROFIBUS DP V0 and V1 cards also support the PROFIdrive profile.

Communication is monitored according to the specific criteria for each protocol. However, regardless of the protocol, it is possible to configure how the drive responds to a communication fault:

- Freewheel stop, stop on ramp, fast stop or braked stop
- Maintain the last command received
- Fallback position at a predefined speed
- Ignore the fault

A command from the CANopen machine bus is processed with the same priority as one of the drive terminal inputs. This results in excellent response times on the network port via the CANopen adaptor.

Presentation

Resistance braking enables Altivar 71 drives to operate while braking to a standstill or during generator operation, by dissipating the energy in the braking resistor.

ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71H075N4...HC16N4, ATV 71W●●●N4, ATV 71P●●●N4Z, ATV 71H●●●S6X and ATV 71HU22Y...HC16Y drives have a built-in dynamic brake transistor.

A braking unit is required for ATV 71HC20N4...HC50N4, ATV 71QC16N4...QC50N4, ATV 71HC20Y...HC63Y and ATV 71QC20Y...QC63Y drives which is controlled by the drive.

For drives

- ATV 71HC20N4, HC28N4 and ATV 71QC16N4...QC25N4, the braking units is mounted directly on the left-hand side of the drive
- ATV 71HC40N4, HC50N4, ATV 71QC40N4, QC50N4, ATV 71HC20Y...HC63Y and ATV 71QC20Y...QC63Y, the braking unit is an external module.

Braking units provide IP 20 protection. Thermal protection is provided by an integrated temperature probe.

Applications

High-inertia machines, machines with slow and fast cycles, high-power machines performing vertical movements.

Note: To increase the braking power, several braking resistors can be mounted in parallel on the same braking unit. In this case, do not forget to take the minimum resistance value to be associated with the braking unit into account, that is:

- 1.05 ohm for the VW3 A7 101 braking unit
- 0.7 ohm for the VW3 A7 102 braking unit
- 2 ohms for the VW3 A7 103 braking unit
- 1 ohm for the VW3 A7 104 braking unit

Presentation

VW3 A7 701

Braking resistors allow Altivar 71 drives to operate while braking to a standstill, by dissipating the braking energy. They enable maximum transient braking torque.

Braking resistors are designed to be mounted on the outside of the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air must be free of dust, corrosive gas and condensation.

Two resistor models are available, depending on the drive rating:

- One with IP 20 casing and thermal protection provided by temperature-controlled switch or by the drive (VW3 A7 701...709)
- One with IP 23 casing and thermal protection provided by thermal overload relay (VW3 A7 71● and 8●●)

The internal circuits of Altivar 71 drives rated 160 kW or less have a built-in dynamic brake transistor.

Applications

Inertia machines, machines with cycles

Presentation

Hoist resistors are braking resistors which allow Altivar 71 drives to operate while braking to a standstill or during slowdown braking, by dissipating the braking energy. They enable maximum transient braking torque.

The resistors are designed to be mounted on the outside of the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed in any way. The air must be free of dust, corrosive gas and condensation.

The internal circuits of Altivar 71 drives rated 160 kW or less have a built-in dynamic brake transistor.

The resistors have IP 23 degree of protection (except for VW3 A7 801, which provide IP 23 protection when mounted horizontally and IP 20 in all other cases). Thermal protection is provided by a thermal overload relay.

Note: For ATV 71HC20N4...HC50N4, ATV 71QC16N4...QC50N4, ATV 71HC20Y...HC63Y and ATV 71QC20Y...QC63Y drives, a braking unit must be used (see page 64).

Applications

Machines performing vertical movements, machines with fast cycles, high-inertia machines.

(1) Operating factor for hoist resistors: The value of the average power that can be dissipated at 50°C from the resistor is determined by a load factor during braking.

For VW3 A7 716...718:

- 10 s braking with 2 T_n braking torque for a 30 s cycle

For VW3 A7 801...808 and VW3 A7 818:

- 100 s braking with 1 T_n braking torque for a 200 s cycle

- 20 s braking with 1.6 T_n braking torque for a 200 s cycle

For VW3 A7 809...817:

- 10 s braking with 2 T_n braking torque for a 240 s cycle

- 110 s braking with 1.25 T_n braking torque for a 240 s cycle

(2) The two braking resistors must be connected in parallel. The dimensions of all the components must be taken into account as well as the required space of 300 mm to be left between each resistor (see our website www.schneider-electric.com).

(3) The two braking resistors must be connected in series. The dimensions of all the components must be taken into account as well as the required space of 300 mm to be left between each resistor (see our website www.schneider-electric.com).

Variable speed drives

Altivar 71

Option: network braking units

Presentation

Network braking units can be used to restore the following to the line supply:

- The energy from the motor
- The energy from the motors controlled by several drives connected on the same DC bus

One of the many advantages of a network braking unit is that it allows a very quick, yet smooth transition between starting and stopping. It is ideal for use in applications where high braking dynamics are required.

It is also very well suited to use on unstable power supplies.

It is available for **ATV 71...N4** and **ATV 71P...N4Z** drives.

Depending on the braking time required, a specific idle time is necessary between two consecutive braking operations: see the characteristics curves on our website www.schneider-electric.com.

Network braking units provide IP 20 protection.

Note: For applications requiring a very low total current harmonic distortion (THDI) (< 4%), use the Active Front End (see page 72).

Applications

Braking on a driving load:

- Vertical movements
- Escalators
- ...

Variable speed drives

Altivar 71

Variable speed drives

Altivar 71

Option: Active Front End

Presentation

The Active Front End allows Altivar 71 drives to return energy to the line supply. With 4 quadrant-operation, the Active Front End is ideal for applications that allow a generator mode.

It is available for a range of drives between 0.75 kW and 630 kW with three types of 50/60 Hz power supply:

- 380...440 V three-phase
- 480 V three-phase
- 500...690 V three-phase

It has been developed to comply with European directives and to obtain CE marking.

Apart from the possibility of significantly reducing the level of harmonics, this technology offers several benefits:

- Increased application dynamics
- Operation on unstable line supplies
- Amplification of the input voltage
- Power factor ($\cos \phi$) of 1

The Active Front End consists of a set of three modules installed upstream of the drive between the line supply and the motor.

It is made up of the following elements:

- A **line filter module (LFM)** 1, used at the input, incorporating:
 - A charging circuit
 - A line contactor
 - An EMC filter
- A **line filter choke (LFC)** 2, consisting of three single-phase chokes, connected between the line filter module (LFM) and the active infeed converter (AIC)
- An **active infeed converter (AIC)** 3

The Active Front End powers the Altivar 71 drive via the common DC bus, while enabling it to return energy to the line supply. It is also used to:

- Limit the total current distortion factor (THDI) to less than 4%
- Supply direct current to several drives of different power ratings, operating in parallel, if required by the installation

The Active Front End offers IP 00 protection. The ambient air temperature during operation must be between - 10°C and + 45°C (without derating, + 60°C with derating).

It is imperative that the protection of the Active Front End on the line supply side is supplemented by fuses for semi-conductors (to protect against short-circuits or a system failure).

The DC bus output only requires fuse protection if Active Front End modules are used in parallel.

Applications

Applications with energy return on driving load:

- Cranes, hoists, platform trucks (long travel), etc.
- Downhill conveyors, winches, escalators, etc.

Test benches and drives with high dynamics

Applications requiring a very low harmonic level

Applications with high inertia and strong dynamics

Variable speed drives

Altivar 71: reduction of current harmonics

Option: DC chokes

Depending on the line supply, the main solutions for reducing current harmonics are as follows:

- DC chokes (1) (see page 77)
- Line chokes (1) (see page 78)
- 16% and 10% passive filters (1) (see page 81)
- Use of passive filters with a DC choke (see page 81)

These four solutions can be used on the same installation (1).

It is always easier and less expensive to deal with current harmonics at installation level as a whole rather than at the level of each individual device, particularly when using passive filters and active compensators.

Presentation

DC chokes are used to reduce current harmonics in order to comply with standard IEC 61000-3-12 for drives in which the line current is more than 16 A and less than 75 A.

Using a DC choke with the drive complies with standard IEC 61000-3-12 provided that the RSCE ≥ 120 at the point of connection to the public power supply.

It is the responsibility of the installer or the user to ensure that the device is connected correctly to a connection point with an RSCE ≥ 120 .

The DC choke is connected to the drive power terminals.

The DC choke is supplied as standard with ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives.

It is compulsory for ATV 71P...N4Z drives if they do not have a fan (see page 27).

It provides IP 20 degree of protection.

Applications

Reduction of current harmonics.

Reduction of the THDI to 5% or 10% when used with passive filters (see pages 82 and 83).

Maintaining the motor torque in relation to the line inductance.

(1) For ATV 71H...S6X and ATV 71HU22Y...HD90Y drives, only line chokes are recommended.

They are mandatory for ATV 71QD90N4...QC50N4, ATV 71HC11Y...HC63Y and ATV 71QC11Y...QC63Y drives (see page 78).

(1) The DC choke is supplied as standard with ATV 71HD55M3X, HD75M3X and ATV 71HD90N4...HC50N4 drives.

(2) Total current harmonic distortion in accordance with IEC 61000-3-12.

Variable speed drives

Altivar 71: reduction of current harmonics

Option: line chokes

Presentation

Line chokes are used to provide improved protection against overvoltages on the line supply and to reduce harmonic distortion of the current produced by the drive.

The recommended chokes limit the line current.

They have been developed in line with standard IEC 61800-5-1 (VDE 0160 level 1 high-energy overvoltages on the line supply).

The choke values are defined for a phase-to-phase voltage drop of between 3% and 5% of the nominal supply voltage. Values higher than this will cause loss of torque.

Line chokes are mandatory:

- For ATV 71HU40M3...HU75M3 drives powered by a 200...240 V 50/60 Hz single-phase supply voltage
- For ATV 71QD90N4...QC50N4, ATV 71HC11Y...HC63Y and ATV 71QC11Y...QC63Y drives

Their use is recommended with ATV 71H●●●S6X and ATV 71HU22Y...HD90Y drives.

They can also be used instead of a DC choke with ATV 71H●●●M3 drives powered by a 200...240 V 50/60 Hz three-phase supply and ATV 71H●●●M3X, ATV 71●●●●N4 and ATV 71P●●●●N4Z drives.

Note: ATV 71HD90N4...HC50N4, supplied as standard with a DC choke, can be ordered without a choke by adding the letter D at the end of the reference (see page 22).

Chokes must be installed upstream of the drive.

Applications

The use of line chokes is recommended in particular under the following circumstances:

- Close connection of several drives in parallel
- Line supply with significant disturbance from other equipment (interference, overvoltages)
- Line supply with voltage imbalance between phases that is more than 1.8% of the nominal voltage
- Drive supplied by a line with very low impedance (in the vicinity of power transformers 10 times more powerful than the drive rating)
- Installation of a large number of frequency inverters on the same line
- Reduction of overloads on the $\cos \varphi$ correction capacitors, if the installation includes a power factor correction unit

(1) Use of a line choke is mandatory.

(2) Use of a line choke is recommended.

Variable speed drives

Altivar 71: reduction of current harmonics

Option: passive filters

Presentation

Passive filters are used to reduce current harmonics with total harmonic distortion factors of less than 16% or 10%.

These performance levels can be improved still further and the harmonic distortion reduced to less than 10% or 5% if the filter is used with a DC choke (see pages 82 and 83).

The reactive power increases at no load or low load. To eliminate this reactive power, the filter capacitors can be disconnected via the drive (see the diagrams on our website www.schneider-electric.com or refer to the Programming Manual).

The passive filters provide IP 20 protection.

ATV 71H...Y, ATV 71Q...Y and ATV 71H...S6X drives are not compatible with the use of passive filters. It is recommended or mandatory, depending on the rating, to use a line choke (see page 78).

Applications

Reduction of current harmonics in order to use drives in the first environment (restricted distribution, for domestic use, sale conditional on the competence of the user and the distributor in terms of reduction of current harmonics).

(1) By adding a DC choke (see page 76) to **ATV 71●075N4...●D75N4** and **ATV 71P●●●N4Z** drives, a total current harmonic distortion (THD) ≤ 10% is obtained.

This DC choke is supplied as standard with **ATV 71HD90N4...HC50N4** drives.

These reduced current harmonics are achieved for the nominal filter current only as long as the total voltage harmonic distortion (THDU) is < 2% and the short-circuit ratio (RSCE) is > 66.

(2) In: Nominal filter current.

(1) By adding a DC choke (see page 76) to **ATV 71●075N4...●D75N4** and **ATV 71P●●●N4Z** drives, a total current harmonic distortion (THD) $\leq 5\%$ is obtained.

This DC choke is supplied as standard with **ATV 71HD90N4...HC50N4** drives.

These reduced current harmonics are achieved for the nominal filter current only as long as the total voltage harmonic distortion (THDU) is $< 2\%$ and the short-circuit ratio (RSCE) is > 66 .

(2) In: Nominal filter current.

Variable speed drives

Altivar 71: EMC filters

Integrated filters and optional additional filters

Integrated EMC filters

Altivar 71 drives (excluding the ATV 71H●●●M3X) have built-in radio interference filters to comply with the EMC standard for adjustable speed electrical power drive systems IEC/EN 61800-3, edition 2, category C2 or C3 in environment 1 or 2 and the European Electromagnetic Compatibility Directive.

Additional EMC input filters

Applications

When used with ATV 71H●●●M3, ATV 71H●●●M3X, ATV 71●●●●N4 and ATV 71P●●●N4Z drives, additional EMC input filters can be used to meet more stringent requirements and are designed to reduce conducted emissions on the line supply below the limits of standards EN 55011 group 1, class A or B and IEC/EN 61800/3 category C2 or C3.

For ATV 71H●●●M3, ATV 71HD11M3X...HD45M3X, ATV 71H075N4...HD75N4 and ATV 71P075N4Z...PD11N4Z drives, additional EMC filters can be mounted beside or under the drive. They act as a support for the drives and are attached to them via tapped holes.

For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 and ATV 71QD90N4...QC50N4 drives, additional EMC filters can only be mounted beside the drive.

Use according to the line supply type

Use of these additional filters is only possible on TN (connected to neutral) and TT (neutral to earth) type networks.

Standard IEC/EN 61800-3, appendix D2.1, states that on IT networks (isolated or impedance earthed neutral), filters can cause permanent insulation monitors to operate in a random manner.

In addition, the effectiveness of additional filters on this type of network depends on the type of impedance between neutral and earth, and therefore cannot be predicted.

In the case of a machine which needs to be installed on an IT network, the solution would be to insert an isolation transformer and place the machine locally on a TN or TT network.

(1) If motors are connected in parallel, it is the sum of all cable lengths that should be taken into account.

(1) These limits are given as examples only as they vary depending on the stray capacitance of the motors and the cables used. If motors are connected in parallel, it is the sum of all cable lengths that should be taken into account.

(2) Nominal filter current.

(3) Maximum earth leakage current at 230 V and at 400 V 50 Hz on a TT system.

(4) Via heat dissipation.

(5) It is possible to use a special filter **VW3 A4 409** with a leakage current I_f (3) of 14 mA which enables a maximum motor cable length of 100 m.

Variable speed drives

Altivar 71: output filters

Altivar 71 drives have been designed to operate (without the need for additional optional equipment) with the following maximum motor cable lengths:

For drives	Maximum motor cable length (1)	
	Shielded	Unshielded
	m	m
ATV 71H●●●M3 ATV 71HD11M3X, HD55M3X ATV 71H075N4...HD75N4 ATV 71W075N4...WD75N4 ATV 71WD075N4C...WD75N4C ATV 71P075N4Z...PD75N4Z	50	100

ATV 71HD37Y...HD90Y	10	10
ATV 71HC11Y...HC63Y ATV 71QC11Y...QC63Y	15	30

(1) These values are given for a maximum switching frequency of 2.5 or 4 kHz depending on the rating.

Altivar 71 drives include as standard a software function used to limit overvoltages at the motor terminals. For more information, please refer to the Programming Manual (SUL function).

Depending on the cable lengths or the type of application, it may be necessary to use output filters:

- Motor chokes used to limit the dv/dt (see page 87)
- Sinus filters that are particularly effective for long cable runs or to reduce electromagnetic motor noise (see page 90)

Motor choke

Motor chokes allow operation with motor cables which are longer than the standard lengths and/or limit the dv/dt at the motor terminals to:

- 500 V/ μ s for 200...400 V and 380...480 V three-phase line supplies
- 1000 V/ μ s for 500...690 V three-phase line supplies

They are also used to:

- Limit overvoltages at the motor terminals
- Filter interference caused by opening of a contactor placed between the filter and the motor
- Reduce the motor earth leakage current

Choke performance is ensured by not exceeding the cable lengths given on pages 88 and 89.

For an application with several motors connected in parallel, the cable length must include all cabling. If a cable longer than that recommended is used, the motor chokes may overheat.

Maximum motor cable lengths according to the application

Depending on the type of application, drives can either be used on their own or with the addition of various options.

The table below gives several examples of maximum permissible motor cable lengths according to application type:

Application type	Supply voltage		Maximum unshielded motor cable length	
	V ~	V $\overline{\sim}$	Without motor choke m	With motor choke (1) m
For ATV 71H075N4...HU40N4, ATV 71W075N4...WU40N4 and ATV 71P075N4...PU40N4 drives				
Drive only	400...480	560...680	100	200
With braking resistor (braking cycle = 5%)	400...480	785	100	200
With braking resistor (braking cycle $\geq$ 50%) For hoisting application	400...480	785	20	200
With Active Front End (AFE)	400	650	100	200
	480	770	20	200
For ATV 71H...M3, H...M3X, ATV 71HU55N4...HD75N4 and ATV 71WU55N4...WD75N4 drives				
Drive only	400...480	560...680	100	300
With braking resistor (braking cycle = 5%)	400...480	785	100	300
With braking resistor (braking cycle $\geq$ 50%) For hoisting application	400...480	785	20	300
With Active Front End (AFE)	400	650	100	300
	480	770	20	300
For ATV 71HD90N4...HC50N4 and ATV 71QD90N4...QC50N4 drives				
Drive only	400...480	560...680	100	300
With braking resistor (braking cycle = 5%)	400...480	785	100	300
With braking resistor (braking cycle $\geq$ 50%) For hoisting application	400...480	785	30	300
With Active Front End (AFE)	400	650	100	300
	480	770	30	300

(1) A sinus filter is required for use with longer cables (see page 90).

(3) Maximum length given for a 690 V 50 Hz three-phase supply voltage.

Variable speed drives

Altivar 71: output filters

Option: sinus filters

Presentation

Sinus filters allow Altivar 71 drives to operate with long motor cables (300 m to 1000 m) and ensure significant motor noise reduction.

For ATV 71H075M3...HD45M3X, ATV 71●075N4...●D75N4 and ATV 71P●●●N4Z drives, they also allow the use of unshielded cables while still complying with the standards relating to radiated EMC emissions (EN 55011 class A Gr1 and IEC/EN 61800-3 category C2).

For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 and ATV 71QD90N4...QC50N4 drives, the sinus filter only operates with a voltage/frequency drive ratio.

Note: Please refer to the *Programming Manual* when setting up the sinus filter.

Applications

■ For ATV 71H075M3...HD45M3X, ATV 71●H075N4...●D75N4 and ATV 71P●●●N4Z drives, applications requiring:

- ☐ Long cable runs
- ☐ Mechanical restrictions preventing the use of shielded cables
- ☐ An intermediate transformer between the drive and the motor
- ☐ A reduction in motor noise
- ☐ Motors connected in parallel

■ For ATV 71HD55M3X, HD75M3X, ATV 71HD90N4...HC50N4 and ATV 71QD90N4...QC50N4 drives, applications requiring:

- ☐ An intermediate transformer between the drive and the motor
- ☐ A reduction in electromagnetic motor noise

Applications

Circuit-breaker/contactor/drive combinations can be used to ensure continuous service of the installation with optimum safety.

The type of circuit-breaker/contactor coordination selected can reduce maintenance costs in the event of a motor short-circuit by minimizing the time required to make the necessary repairs and the cost of replacement equipment. The suggested combinations provide type 1 or type 2 coordination depending on the drive rating.

Type 2 coordination: A motor short-circuit will not damage the device or affect its settings. The motor starter must be able to operate once the electrical fault has been removed. The electrical isolation provided by the circuit-breaker will not be affected by the short-circuit. Welding of the contactor contacts is permissible if they can be separated easily.

Type 1 coordination: The electrical isolation provided by the circuit-breaker will not be affected by the incident and no other elements apart from the contactor are damaged as a result of the motor short-circuit.

The drive controls the motor, provides protection against short-circuits between the drive and the motor and protects the motor cable against overloads. The overload protection is provided by the drive's motor thermal protection. If this protection is removed, external thermal protection must be provided.

Before restarting the installation, the cause of the trip must be removed.

For other voltages available between 24 V and 660 V, or a DC control circuit, please contact our Customer Care Centre.

Variable speed drives

Altivar 71

Pre-equipped IP 54 floor-standing enclosure kit

IP 54 floor-standing enclosure kit

Presentation

The pre-equipped kit solution is used to create an IP 54 certified floor-standing enclosure for 90 kW to 500 kW, IP 20 Altivar 71 variable speed drives for a 380...480 V three-phase power supply.

This kit has been designed to:

- Reduce setup time through:
 - Simplified assembly
 - Optimized thermal and mechanical dimensioning

The cooling systems used enable the equipment to be installed in difficult and dusty environments.

The temperature must not exceed + 45°C outside the enclosure or +50°C inside the enclosure; the temperature is monitored by a thermostat which can shut down the equipment if these limits are exceeded.

Cooling system with a single air circuit

Cooling system with three separate air circuits

Cooling systems

There are two types of cooling, depending on the model:

- **VW3 A9 541 and VW3 A9 542** enclosure kits with a single air circuit for the power section:

- Air inlet via the plinth **1**
- Air outlet on the enclosure roof **2**

- **VW3 A9 543...548** enclosure kits with three separate air circuits:

- One for the power section:
 - Air inlet via the plinth **1**
 - Air outlet on the enclosure roof **2**
- Two for the control section with cooling system using an air/air exchanger:
 - External air circuit **3** for cooling the heat exchanger **5**
 - Internal air circuit **4** cooled by the heat exchanger **5**

This system makes it possible to isolate the air circulating in the power section from the control section, thereby ensuring better protection against the entry of contaminants (in hostile and dusty environments).

Options

There are two additional 600 and 800 mm empty enclosure kits **VW3 A9 55●** for adding accessories or options.

The additional empty enclosure kit must be installed on the left side of the pre-equipped IP 54 enclosure kit. In this case, the left-hand panel of the pre-equipped IP 54 enclosure kit is mounted on the left side of the additional empty enclosure kit which is supplied without side panels.

Description

The kit includes:

- Air/air heat exchanger (except for enclosure kits **VW3 A9 541** or **VW3 A9 542**) **1**
- IP 65 graphic display terminal remote mounting kit **2**
- Handle with a pushbutton-operated opening mechanism **3**
- Document holder **4**
- Plinth **5**
- Lower air duct **6**
- EMC plate **7**
- Drive support **8**
- Roof extension **9**
- Upper air duct
- 24 V $\bar{\cdot}$ 600 mA supplementary power supply
- Fixing accessories, seals
- Technical documentation containing parts lists, electrical diagrams and mechanical assembly drawings

Variable speed drives

Altivar 71 Plus

“Ready to use” IP 54 floor-standing enclosure

PF090305

“Ready to use” IP 54 floor-standing enclosure

Presentation

Altivar 71 variable speed drives can also be supplied in a “ready to use” IP 54 certified floor-standing enclosure, which makes it possible to achieve an IP 54 degree of protection for Altivar 71 IP 20 drives.

This range has been designed to offer a simple and economical “ready to use” solution which keeps setup time to a minimum. The enclosures are supplied ready-assembled and ready to connect, making wiring fast and easy.

This standard version enables the equipment to be made available very quickly.

It covers motor power ratings from 90 kW to 500 kW for a 380...415 V three-phase supply.

Cooling system with two separate air circuits

Cooling system

The cooling system used ensures optimum ventilation of the equipment, even in difficult and dusty environments.

Cooling is provided by two separate air circuits:

- One for the power section:
 - Air entry via an intake grille on the plinth 1
 - Air outlet via a metal cover with protection against water splashes on the enclosure roof 3
- One for the control section:
 - Air entry via an intake grille with fan (fitted with a filter) on the enclosure door 4
 - Air outlet through a filter 5

The incoming air temperature must be 0...+ 40°C.

The temperature is monitored by a thermostat which can shut down the equipment.

Variable speed drives

Altivar 71 Plus

“Ready to use” IP 54 floor-standing enclosure

Description

The offer comprises:

- A wired, ready-assembled Sarel “Spacial SF” enclosure **1**
- An ATV 71HD90N4...HC50N4 drive on heatsink **3**
- An IP 65 remote mounting kit for graphic display terminal **2**
- A DC choke **4**
- Motor terminals **5**
- A magnetic circuit-breaker **6**
- A plinth **7**

Variable speed drives

Altivar 71 Plus

IP 23 or IP 54 enclosure with separate air flows

Presentation

The Altivar 71 Plus offer with separate air flows has been designed to meet requirements for harsh and highly polluted environments.

Altivar 71 variable speed drives are supplied ready-assembled in an IP 23 or IP 54 floor-standing enclosure to facilitate their installation and setup, while ensuring optimum ventilation.

The enclosures are supplied ready to connect.

The offer comprises two versions:

■ The **ATV 71EXS5●●●●●** version consists of a single enclosure providing IP 54 protection.

It covers motor power ratings from 500 kW to 2000 kW with three types of power supply:

- 380...415 V three-phase, 90 kW to 500 kW (**ATV 71EXS5●●●●N4**)
- 500 V three-phase, 90 kW to 500 kW (**ATV 71EXS5●●●●N**)
- 690 V three-phase, 110 kW to 630 kW (**ATV 71EXS5●●●●Y**)

Optimum enclosure ventilation is ensured by two separate cooling circuits for the control section and the power section.

■ The **ATV 71EXA●●●●●** version consists of a set of 4 or more enclosures providing IP 23 or IP 54 protection, depending on the model.

It covers motor power ratings from 500 kW to 2000 kW with three types of power supply:

- 380...415 V three-phase, 500 kW to 1300 kW (**ATV 71EXA●●●●●N4**)
- 500 V three-phase, 500 kW to 1500 kW (**ATV 71EXA●●●●●N**)
- 690 V three-phase, 600 kW to 2000 kW (**ATV 71EXA●●●●●Y**)

Enclosure ventilation is also ensured by two separate cooling circuits, one for the control section and one for the power section.

In addition, an air circuit is integrated in the power enclosure to ensure excellent ventilation.

The incoming air temperature must be between 0°C and +40°C (-10°C and +40°C with enclosure heater) and may reach +50°C with derating (class 3K3 according to IEC/EN 60721-3-3).

The internal temperature is monitored by a thermostat which can shut down the equipment.

The entire range includes the choice of:

- A standard offer
- A modular offer, in which a wide selection of options can be incorporated depending on the drive rating

Standard ATV 71EXS5●●●●● offer

This consists of:

- A wired, ready-assembled Sarel "Spacial SF" enclosure **1**
- An ATV 71HD90N4...HC50N4 or ATV 71HC11Y...HC63Y drive on heatsink **3**
- An IP 65 remote mounting kit for graphic display terminal **2**
- A DC choke **4** (ATV 71EXS5●●●●N4) or a line choke in an additional enclosure (ATV 71EXS5●●●●N and ATV 71EXS5●●●●Y)
- Motor terminals **5**
- A switch and fast-acting fuses **6**
- A plinth **7**

See pages 108 and 109.

Standard ATV 71EXS5●●●●● offer

Variable speed drives

Altivar 71 Plus

IP 23 or IP 54 enclosure with separate air flows

DF504397

Standard ATV 71EXA offer

Standard ATV 71EXA offer

The ATV 71EXA offer is supplied in wired, ready-assembled Sarel "Spacial SF" enclosures.

Configuration example for a standard ATV 71EXA offer:

- An enclosure for the power supply with an IP 65 remote mounting kit for graphic display terminal 1, a switch 2, terminals 3 and fast-acting fuses
- An enclosure for the power section cooled by an integrated air circuit 4
- An enclosure with motor connection terminals 5
- An enclosure for the power section cooling circuit with heat exchanger and fans 6

See pages 108 and 109.

Modular offer

This consists of:

- The ATV 71EXS5 or ATV 71EXA standard separate air flow offer
- One or more options (see pages 114 to 123)

As well as these specific options, all the options available for Altivar 71 drives can be used, at the same rating, with the enclosed drives offer (see the summary tables of possible drive, option and accessory combinations on pages 42, 43 and 48 to 51).

For any configuration other than those shown on pages 114 to 123, please contact our Customer Care Centre.

Common options

These options can be integrated, whatever the enclosure model, without any need for modifications to the enclosure:

- Adapter for 115 V ~ logic inputs
- Encoder interface cards
- I/O expansion cards
- Controller Inside programmable card
- Modbus TCP Daisy Chain, EtherNet/IP, DeviceNet, INTERBUS, CC-Link, Modbus/Uni-Telway, PROFIBUS DP V0 or V1, EtherCAT communication cards
- "Preventa type AC" or "Preventa type ATE" fault relay
- PTC relays, PT100 relays
- Motor heater
- Additional 24 V power supply
- Enclosure lighting
- Emergency stop button
- Key switch (Local/Remote)
- Power supply circuit for external fan

See pages 114 and 115. For all other options, please contact our Customer Care Centre.

Options dependent on the drive rating

These options depend on the drive rating. Some may lead to modification of the size of the enclosure:

- Braking unit
- Isolating handle for switch
- Circuit-breaker
- Line contactor
- Control transformer
- Ammeter
- Enclosure heater
- Motor choke
- Sinus filter
- Air conditioning

See pages 116 to 123. For all other options, please contact our Customer Care Centre.

Variable speed drives

Altivar 71 Plus

IP 23 or IP 54 floor-standing enclosure compact version

IP 23 cooling circuit

IP 54 cooling circuit

Standard ATV 71EXC offer

Presentation

The ATV 71EXC offer consists of a compact enclosure providing IP 23 or IP 54 protection for industrial environments and infrastructures.

Altivar 71 variable speed drives are supplied ready-assembled in an IP 23 or IP 54 enclosure to facilitate installation and setup and, in particular, to ensure optimum ventilation.

The enclosure is supplied ready to connect.

One common air circuit provides enclosure ventilation, cooling the power section and the control section. A fan (2) integrated in the drive provides ventilation for the power section.

■ IP 23 air circuit:

- Air intake (1) is via a grille on the lower part of the enclosure door.
- Air outlet (4) is via a metal cover with protection against water splashes on the enclosure roof.
- A separating plate (3) prevents internal turbulence.

■ IP 54 air circuit:

- The grille (1) on the lower part of the door is fitted with a protective filter.
- The air outlet (3) on the enclosure roof is fitted with a fan with filter.

The incoming air temperature must be between 0°C and 40°C (-10°C and 40°C with enclosure heater) and may reach +50°C with derating (class 3K3 according to IEC/EN 60721-3-3).

The internal temperature is monitored by a thermostat which can shut down the equipment.

The ATV 71EXC offer covers motor power ratings from 90 kW to 630 kW with three types of power supply:

- 380...415 V three-phase, 90 kW to 500 kW (ATV 71EXC...N4)
- 500 V three-phase, 90 kW to 500 kW (ATV 71EXC...N)
- 690 V three-phase, 110 kW to 630 kW (ATV 71EXC...Y)

It includes the choice of:

- A standard compact offer
- A modular offer, in which a wide selection of options can be incorporated depending on the drive rating.

Standard compact offer

This consists of:

- A wired, ready-assembled Sarel "Spacial SF" enclosure (1)
- An ATV 71HD90N4D...HC50N4D or ATV 71HC11Y...HC63Y drive on heatsink (3)
- An IP 65 remote mounting kit for graphic display terminal (2)
- A switch and fast-acting fuses (4)
- Motor terminals (5)
- A line choke (6)

See pages 112 and 113.

Variable speed drives

Altivar 71 Plus

IP 23 or IP 54 floor-standing enclosure compact version

Modular offer

This consists of:

- The standard compact offer
- One or more options (see pages 114 to 121)

As well as these specific options, all the options available for Altivar 71 drives can be used, at the same rating, with the enclosed drives offer (see the summary tables of possible drive, option and accessory combinations on pages 42, 43 and 48 to 51).

For any configuration other than those shown on pages 114 to 123, please contact our Customer Care Centre.

Common options

These options can be integrated, whatever the enclosure model, without any need for modifications to the enclosure:

- Adapter for 115 V ~ logic inputs
- Encoder interface cards
- I/O expansion cards
- Controller Inside programmable card
- Modbus TCP Daisy chain, EtherNet/IP, DeviceNet, INTERBUS, CC-Link, Modbus/Uni-Telway, PROFIBUS DP V0 or V1, EtherCAT communication cards
- "Preventa type AC" or "Preventa type ATE" fault relay
- PTC relays, PT100 relays
- Motor heater
- Additional 24 V --- power supply
- Emergency stop button
- Enclosure lighting
- Key switch (Local/Remote)
- Power supply circuit for external fan

See pages 114 and 115. For all other options, please contact our Customer Care Centre.

Options dependent on the drive rating

These options depend on the drive rating. Some may lead to modification of the size of the enclosure:

- Braking unit
- Isolating handle for switch
- Circuit-breaker
- Line contactor
- Control transformer
- Ammeter
- Enclosure heater
- Motor choke
- Sinus filter
- Plinth

See pages 116 to 123. For all other options, please contact our Customer Care Centre.
